

id: FREEZE-ARCHITECTURE
type: DOCUMENTATION_FREEZE
profile: architecture
format: markdown
status: GENERATED

Architecture Documentation Freeze

Generates a deterministic Markdown architecture snapshot from the current OpenLAG graph.

> Generated by openlag freeze from the local OpenLAG frozen document model.

Artifacts: 10 | Relations: 9

Project and Versions

OpenLAG 0.5.0 Lifecycle Evolution

- ID: openlag-0.5.0
- Type: VERSION
- Status: ready
- Layer: DOCUMENTATION
- Owner: donartcha
- Team: openlag
- Source: docs/versions/openlag-0.5.0.md

Contract-driven lifecycle evolution adding starter onboarding, freeze/export, rule contracts, profile packs, p

Body

OpenLAG 0.5.0 Lifecycle Evolution

This version documents how OpenLAG evolves from the 0.4.0 baseline into the 0.5.0 contract-driven lifecycle mo

The root repository now acts as the primary OpenLAG project. Its lifecycle documentation is stored in docs/*,

| Direction | Relation | Artifact |

| --- | --- | --- |

OpenLAG 0.4.0 Release Baseline

- ID: openlag-0.4.0
- Type: VERSION
- Status: closed
- Layer: DOCUMENTATION
- Owner: donartcha
- Team: openlag
- Source: docs/versions/openlag-0.4.0.md

Published baseline containing project-local artifact contracts, relation runtime payloads, richer lint report

Body

OpenLAG 0.4.0 Release Baseline

This version represents the audited stable baseline before the 0.5.0 lifecycle evolution.

In this baseline, the repository-root docs/* dataset was the observable OpenLAG project used to generate the a

Requirements and Use Cases

No artifacts matched this section.

Architecture and Decisions

Implementation

Freeze and Export Evidence

- ID: feature-freeze-export
- Type: FEATURE
- Status: ready
- Layer: BUSINESS
- Owner: donartcha
- Team: openlag
- Source: docs/features/feature-freeze-export.md

OpenLAG can freeze architecture documentation into deterministic markdown, JSON, HTML, and PDF evidence output

Body

Freeze and Export Evidence

OpenLAG 0.5.0 introduces release evidence generation through the freeze workflow and export profiles.

This makes lifecycle documentation portable across review, audit, and release contexts.

Direction Relation Artifact
--- --- ---
outgoing REFINES change-openlag-0.5.0-evolution
incoming TESTS test-openlag-0.5.0-release-validation

Preview Workflow

- ID: feature-preview-workflow
- Type: FEATURE
- Status: ready
- Layer: BUSINESS
- Owner: donartcha
- Team: openlag
- Source: docs/features/feature-preview-workflow.md

OpenLAG can generate and build a static portal for inspecting architecture graph outputs.

Body

Preview Workflow

The preview workflow turns project documentation into graph data and a static portal.

For OpenLAG 0.5.0, the primary preview is generated from repository-root docs/*; sandbox previews remain second

Profile Packs

- ID: feature-profile-packs
- Type: FEATURE
- Status: ready
- Layer: BUSINESS
- Owner: donartcha
- Team: openlag
- Source: docs/features/feature-profile-packs.md

OpenLAG 0.5.0 packages reusable architecture, governance, starter, and domain profiles.

Body

Profile Packs

Profile packs make OpenLAG usable across different documentation domains without forcing every project to hand

The root project uses the core contracts as its own lifecycle vocabulary and keeps the dev sandbox as a separa

| --- | --- | --- |

| outgoing | REFINES | change-openlag-0.5.0-evolution |

Rule Contracts

- ID: feature-rule-contracts
- Type: FEATURE
- Status: ready
- Layer: BUSINESS
- Owner: donartcha
- Team: openlag
- Source: docs/features/feature-rule-contracts.md

OpenLAG supports project-local rule contracts that make governance and validation behavior explicit.

Body

Rule Contracts

Rule contracts allow OpenLAG projects to define validation behavior alongside artifacts and relations.

For the self-documenting repository, rule contracts are activated under docs/contracts/rules.

| Direction | Relation | Artifact |

| --- | --- | --- |

| outgoing | REFINES | change-openlag-0.5.0-evolution |

| incoming | TESTS | test-openlag-0.5.0-release-validation |

Starter Mode

- ID: feature-starter-mode
- Type: FEATURE
- Status: ready
- Layer: BUSINESS

- Owner: donartcha
- Team: openlag
- Source: docs/features/feature-starter-mode.md

OpenLAG provides starter-oriented onboarding contracts and templates for lightweight project adoption.

Body

Starter Mode

Starter mode lowers the cost of adopting OpenLAG by providing a compact artifact and relation vocabulary.

It complements the full core profile used by this repository for release lifecycle documentation.

Verification and Risk

OpenLAG 0.5.0 Contract-Driven Evolution

- ID: change-openlag-0.5.0-evolution
- Type: CHANGE
- Status: ready
- Layer: IMPLEMENTATION
- Owner: donartcha
- Team: openlag
- Source: docs/changes/change-openlag-0.5.0-evolution.md

Documents the evolution from OpenLAG 0.4.0 to 0.5.0 using OpenLAG artifacts and release evidence.

Body

OpenLAG 0.5.0 Contract-Driven Evolution

This change captures the architectural and documentary evolution between the 0.4.0 release baseline and the 0.

The change reclassifies the repository root as the real self-documenting OpenLAG project and moves the previous

OpenLAG 0.5.0 Release Validation

- ID: test-openlag-0.5.0-release-validation
- Type: TEST_CASE
- Status: ready
- Layer: IMPLEMENTATION
- Owner: donartcha
- Team: openlag
- Source: docs/testing/test-openlag-0.5.0-release-validation.md

Validates the 0.5.0 lifecycle features through root generation, release checks, package dry run, and freeze ou

Body

OpenLAG 0.5.0 Release Validation

This test case covers the final validation path for OpenLAG 0.5.0:

- npm.cmd run check
- node --import tsx scripts/cli/openlag.ts check --profile develop
- node --import tsx scripts/cli/openlag.ts check --profile release --strict
- node bin/openlag.js --version
- npm.cmd pack --dry-run
- root-level generate, build, and freeze evidence

Documentation

OpenLAG Self Lifecycle Documentation

- ID: doc-openlag-self-lifecycle
- Type: DOCUMENTATION
- Status: ready
- Layer: DOCUMENTATION
- Owner: donartcha
- Team: openlag
- Source: docs/documentation/doc-openlag-self-lifecycle.md

Documents the boundary between the root self-documenting project and the internal dev sandbox.

Body

OpenLAG Self Lifecycle Documentation

The OpenLAG repository root is the primary OpenLAG project for lifecycle documentation.

Root-level docs/* captures versions, changes, features, validation evidence, and governance notes for OpenLAG

internal/dev-sandbox/docs remains an internal example and regression dataset. It can be generated and built af
